1. Claims 1-169 are presented for examination.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, drawn to *an apparatus of memory function with instruction command receiving capability based on control input bit*, classified in class 712, subclass 14.
  - II. Claims 8-137, drawn to *an apparatus of memory and instruction processing functions with concurrent and exclusive buses*, classified in class 712, subclass 33.
  - III. Claims 138-169, drawn to *a collection of discrete functional component apparatus to be subject to further restriction and election including carry pattern generator, parallel left shifter, parallel right shifter, range decoder, general decoder, parallel divider, parallel comparator, parallel counter, multi-channel multiplexer, and multi-channel demultiplexer*, classified in class 712, subclasses 221, 223, and 225.
3. The inventions are distinct, each from the other because of the following reasons:  
Inventions of *Group I* and *Groups II and III* are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because *the invention of group I can be used in a system without the concurrent and exclusive buses and any one of the collection of functional components*. The subcombination has separate utility such as *use in a system without the instruction command receive control input bit*.

Inventions of *Group II* and *Group III* are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as

claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because *the invention of group II can be used in a system without any one of the collection of functional components*. The subcombination has separate utility such as *use in a system without the concurrent and exclusive buses*.

4. Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
